About

My name is Levi Zustiak and I am a software developer. I love working with other creative individuals to develop creative solutions to complex problems. I love to learn new things and improve upon the skills I have developed and hope to develop on my journey into the world of software development. This passion for improvement and knowledge allows me to learn and adapt quickly in any environment I find myslef in.

Projects

Senior Project

I was placed on a team of developers and given a project to complete over two semesters. We created an application in asp. net core mvc using C# that leverages the Jira API to allow users to view, create, and edit tasks pertaining to their project boards.

Personal Website

I designed and developed a personal website to display information about myself as well as projects I've been working on and a place to contact me. I used Pug, SCSS, and JS to develop the site. I enjoy coding the websites, rather than using a site builder.

React Apps

I created several applications in a mobile developement class. The class material didn't use some of the latest React developement practices, so I decided to update and change the apps to build my skills in React. Hooks are interesting to say the least.

Skills

Java	OOP
C#	SDLC
Javascript	Version Control
HTML5	UI/UX Design
CSS3	Debugging
React	Adaptability
Python	Teamwork

Education

Southwest Baptist University

Bachelors in Computer Science, Class of 2021
